and #5 are included as possible contributors to this mixture. The probability of selecting a random, unrelated individual who could have contributed to the mixture from Item AI is approximately 1 in 2 thousand in the African American population, 1 in 8 thousand in the Caucasian population, and 1 in 9 thousand in the Hispanic population.

These conclusions are based on statistical analyses that utilized the FBI's population database of unrelated African American, Caucasian, and Hispanic individuals.

It should be noted that identical twins share all genetic information, including STR profiles.

The STR profile for Unknown Male #1 (Items N, P, and the major contributor to Item O) was searched in the Wisconsin DNA Databank at the State level on May 25, 2004. This search resulted in a match between the profile developed for Unknown Male #1 and the DNA profile of a convicted offender in the Wisconsin Convicted Offender Index. These profiles matched at all thirteen STR genetic loci as well as amelogenin.

The personal information on record in the Databank related to the matching offender profile is as follows:
